

# Breezair Icon - selected unopposed...

>>> Here's what California's largest energy provider had to say:

*"...the Breezair' Icon' cooler achieved over twice the efficiency of the competitive products on test at the same air flow rate and still had superior efficiency when delivering about twice the maximum airflow of the others..."*

(Quote from the Executive Summary of the report from the Pacific Gas & Electric Company into evaporative air conditioning, dated April 2007, Report No. 0200)

The report goes on to say ...

"At full speed, the Breezair' Icon' produced more airflow than the previous units..."  
"Evaporative cooling technologies offer ... cooling for a fraction of the energy consumption.  
Because of this, Pacific Gas and Electric promotes (rigid medium (Chiller)) evaporative cooling..."

#### **Breezair Icon -**

*Lots of wanna-be's...  
...no serious competition!*

"The Breezair' Icon', manufactured by Jewley International Pty Ltd of Australia, is a new advanced direct evaporative cooling system... includes a number of improvements over traditional and even other advanced systems..."

- All UV resistant, injection moulded plastic construction eliminating the potential for cabinet rust as well as reducing weight.
- A direct drive, variable speed ECM motor... rather than a belt drive.
- Relatively thick (... 100mm) rigid cellulose pack on all four sides.
- A water quality management system that... releases water through a flush valve only as needed...

Pacific Gas & Electric's independent testing confirms what we have long known...

***Breezair' Icon' is the number one choice in evaporative cooling.***

**Breezair**  
NUMBER ONE IN NATURAL COOLING
