## Evaporative air-conditioning. It's cool to mimic nature.

If you want to see the perfect evaporative air-conditioning system in action, head to the beach on a hot day. As the warm wind blows in from the ocean it will start to cause the sea water to evaporate. This evaporating water will then lower the air temperature, transforming it into a cooling sea breeze.

The same principle is at work in Advantage Air's Ducted Evaporative Air-Conditioning System. Warm outside air is drawn into the external air-conditioning unit. Here it passes over water-saturated pads and is cooled down. The now cooled air is then blown down a central dropper and distributed via the ducting and vents throughout your home. The end result? A cooling sea breeze you can summon at will.

### 1 The Evaporative Unit

The evaporative unit draws air in, cools it and blows it down the dropper.

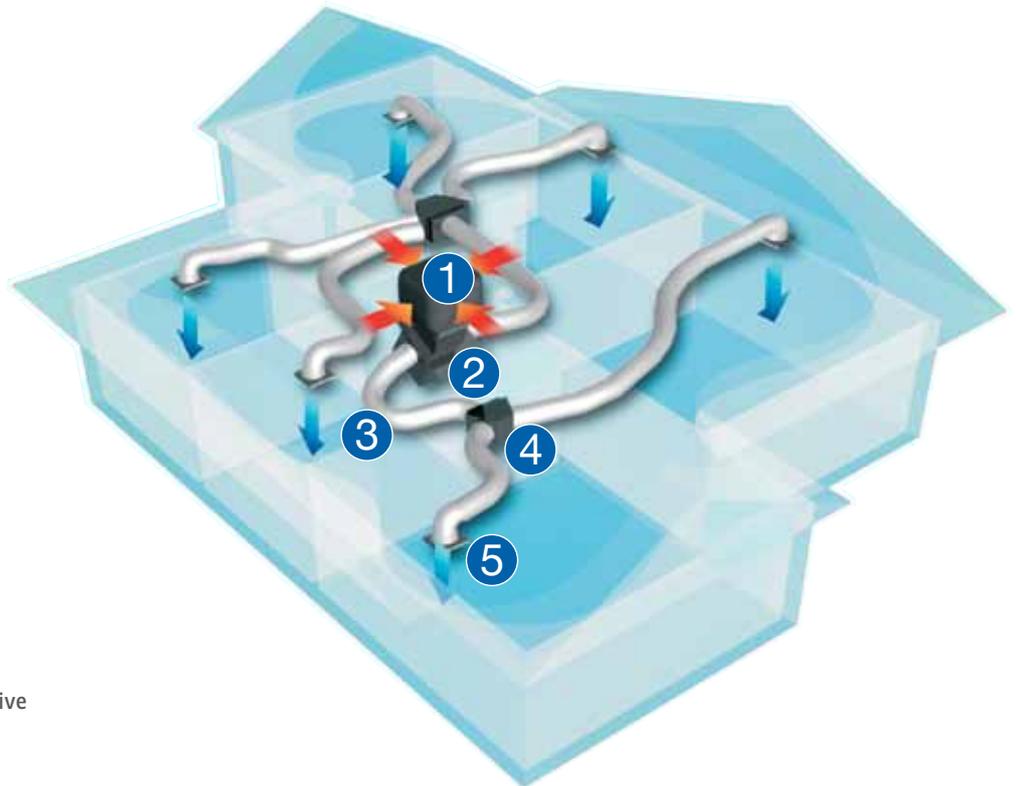

### 2 Dropper System

The Weather Guard dropper sits on the roof and connects the evaporative unit to the ducting system.

### 3 Ducting

Ducting distributes the cool, freshly conditioned air to each room in the home.

### 4 Exact Air Regulator

The Exact Air Regulator controls precisely the amount of air flow required for each room in the home.

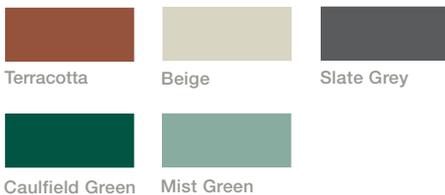

### 5 Outlets

Outlets are the face of the air-conditioning system, they diffuse air into each room in the home.

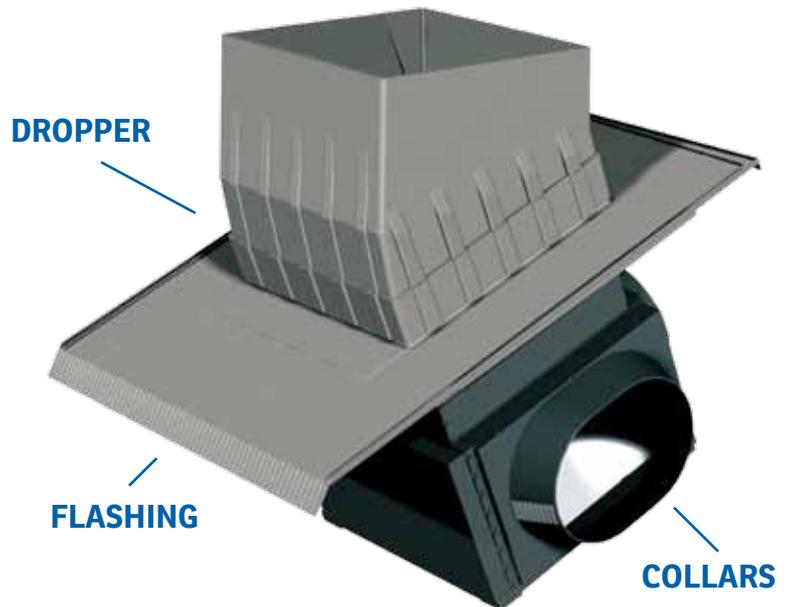

## We've raised the bar with our Weather Guard Dropper.

The dropper is the unsung hero of evaporative systems. Its job is to sit on your roof and connect the air-conditioning unit to the ducting. Advantage Air is the only company to manufacture a one-piece Weather Guard Dropper to eliminate the risk of roof leaks. Its unique base construction also reduces air noise and maximises airflow efficiency.

To ensure it can withstand the elements for years to come, we make it from the highest quality UV stabilized engineering polymers. You can keep your cool, knowing it won't rust, scratch, peel or leak.

Printed colours shown may vary slightly from the actual product.

## Platinum Ducting

When it comes to ducting, platinum beats gold as it offers greater heat reflection. We've further improved our ducting's insulation properties by lining it in high density polyester. Plus we've included a stainless steel spring inner coil for added strength and shape retention. Our ducting meets Australian strength, mould, temperature and fire standards. And if that doesn't blow you away, the 10-year warranty will.

## Products that don't just work better, they also look better.

### Streamline Diffuser

The only diffuser available with 7-point adjustable blades that sit completely flush to the ceiling.

### Streamline Security Relief Vent

Keeps your house secure by releasing air into roof space when windows and doors are closed.

### Wall Register

This wall mounted vent evenly distributes air across the room. It is a useful alternative in rooms with limited ceiling space.

## Peace of mind warranty

Our components are well known in the industry for their quality and precision as well as the extra features built in for additional strength and durability. To prove our confidence, Advantage Air provide a:

- 10 year warranty on all ducting components
- 5 year warranty on all electronic controls

Guarantees only apply to accredited Advantage Air control systems and installations. Exclusion to warranty, 240v zone motors which are covered by a 1 year warranty.

These products form part of an air-conditioning system. If any part of the air-conditioning system is not designed, installed, commissioned, operated or maintained correctly these products may not work as intended.

**10  
YEAR  
WARRANTY**

## Corporate responsibility

Advantage Air is involved in a community project based in Port Elizabeth, South Africa which provides refuge for abandoned babies. The centre can accommodate up to 10 babies, accepts babies up to one year old and looks after them for an average of 2 months before they are adopted and placed with foster parents.

Registered Trademarks include: 'Advantage Air', 'Airweb' and 'Streamline'.
